**Mini PIR Installation Instructions**

The LD2000-P is a controller for use with PIR sensors capable of switching power to one or two individual loads.

A maximum of two PIR sensors can be connected to each controller. One per channel or two on the same channel.

**TIMER**

Timer settings allow the controller to remain on for a preset period from 10 seconds through to one hour.

The timer will restart with any subsequent triggering within the timing cycle.

**LOADS**

LED drivers, electronic and iron core transformers, incandescent and fluorescent lights. Motors, relays, solenoids and fans.

**OUTPUT POWER**

Switching is solid-state with a maximum total load connected to all outputs of 500W.
Connections

**SINGLE LOAD WITH ONE PIR**
1. Remove jumper and connect the PIR to Sensor Input 1.
2. Jumpers remain on Sensor Inputs 2, 3 & 4.
3. Push LHS DIP switch down to select single channel.
4. Connect mains power.
5. Connect load to Load A.
6. Set timer for delay. (Refer to Page 4).

**SINGLE LOAD WITH TWO PIR’S**
1. Remove jumper and connect first PIR to Sensor Input 1.
2. Remove jumper and connect second PIR to Sensor Input 2.
4. Push LHS DIP switch down to select single channel.
5. Connect mains power.
6. Connect load to Load A.
7. Set timer for delay. (Refer to Page 4).

Connections & Timing

**TWO INDIVIDUAL LOADS WITH ONE PIR ON EACH INPUT**
1. Remove jumper and connect first PIR to Sensor Input 1.
2. Remove jumper and connect second PIR to Sensor Input 3.
4. Push LHS DIP switch up to select two channels.
5. Connect mains power.
6. Connect first load to Load A. Controlled by PIR on Sensor Input 1.
7. Connect second load to Load B. Controlled by PIR on Sensor Input 3.
8. Set timer DIP switches for delay. (Refer to Page 4).

**Timing**
The three RHS DIP switches are used for timing. Eight timer settings from 000 to 111 provide a range of 10 seconds through to 1 hour then infinity. The timer sequence will recommence with subsequent triggering. (Refer to Page 4).

**Notes**
1. The PIR may take up to 2 minutes to initialize but could be longer depending on parameters.
2. Connected load/s will be on during the initialization period but will switch off when fully operational.
3. Detection range for our miniature PIR is typically 1.5 - 2 metres.
